

Greenfield Local Hub Website Paired-Coding Review

* Required

Models

1. Are the current models in the solution relevant for the website's purpose? *

☐ Yes

☐ No

2. Why is the current models NOT relevant for the website's purpose? *

3. Could there be any other models be added to the solution which can enhance the website's purpose? *

4. Do all the current models contain the relevant fields or properties to meet the client's specification of the solution? *

☐ Yes

☐ No

☐ Somewhat

5. What fields or properties of the model are NOT relevant to meet the client's specification of the solution, and why? *

6. How could the fields or the properties of the models be changed, so they are easier to work with, when using them in the controllers? Such as understand their purpose from their name or have data size limits. *

Views

7. Are all the current views made in the solution relevant for the website's purpose? *

☐ Yes

☐ No

8. Why are all the current views made in the solution NOT relevant for the website's purpose? *

9. What other views could be added to the website to enhance its purpose? *

10. How could the HTML code in views be improved, so it can be modular and reusable in other parts of the solution? *

11. How could the structure and indentation of the HTML code be improved for better readability? *

12. How could the HTML code in the views be sectioned off or separated, so it is easier to find where the HTML code for a specific functionality would be? *

13. Is all the CSS code used for the views modular and robust for future views or pages? *

☐ Yes

☐ No

14. Why is all the CSS code used for the views NOT modular and robust for future views or pages? *

15. How is the overall usage of the HTML for the solution? *

0	1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	---	----

Terrible

Perfect

16. How is the overall usage of the CSS for the solution? *

0	1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	---	----

Terrible

Perfect

Controllers

17. Are the current controllers in the solution relevant for the website's purpose? *

☐ Yes

☐ No

18. Why are all the current controllers in the solution NOT relevant for the website's purpose? *

19. What other controllers could be added to the website to enhance its purpose? *

20. How could the code in the controllers be improved, to enhance readability? *

21. How could the layout of the code in controllers be improved, to make finding code for a certain functionality of the solution easier? *

22. How is the overall quality of the code written in the controllers? *

Comments

23. Were there an adequate amount comments in the controllers to explain what certain pieces of code is doing? *

☐ Yes

☐ No

24. Were there an adequate amount comments in the HTML to explain what certain pieces of code is doing? *

☐ Yes

☐ No

25. Were there an adequate amount comments in the CSS to explain what certain pieces of code is doing? *

☐ Yes

☐ No

26. Were there an adequate amount comments in the JavaScript to explain what certain pieces of code is doing? *

☐ Yes

☐ No

27. How could the comments be improved to enhance the readability and understanding of the solution's code? *

28. Is the length of the comments adequate to summarise or explain the functionality of certain pieces of code? *

☐ Yes

☐ No

29. Why is the length of the comments NOT adequate to summarise or explain the functionality of certain pieces of code? *

30. In your opinion what is important for comments? *

- ☐ Summarising the code's functionality
- ☐ Explaining the code's functionality line by line
- ☐ Both

31. How is the overall quality of the comments through out the whole solution? *

0	1	2	3	4	5	6	7	8	9	10	
Terrible											Perfect

Naming Conventions

32. Is the file naming conventions used through out the solution consistent and relevant? *

☐ Yes

☐ No

33. Why is the file naming conventions used through out the solution NOT consistent and relevant? *

34. Is the naming conventions used through out the solution's code consistent and relevant? *

☐ Yes

☐ No

35. Why is the naming conventions used through out the solution's code NOT consistent and relevant? *

36. How is the overall quality of the naming conventions used through out the solution? *

0	1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	---	----

Terrible

Perfect

Security

37. Does the security of the code meet industry standards? *

☐ Yes

☐ No

38. Why does the security of the code NOT meet industry standards? *

39. Is all the endpoints in all controllers configured to be secure from unauthorised users?

☐ Yes

☐ No

40. Does the solution ensure the client cannot manipulate the server by sending incorrect or malicious data? *

41. Can you identify any potential security risks in the way inputs are handled in the controllers? *

42. What could be added to the controllers to improve the solution's security? *

43. How is the overall of the security used through out the solution? *

0	1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	---	----

Terrible

Perfect

Efficiency

44. How could some sections of code in the solution be simplified without sacrificing functionality? *

45. What changes could be made to the code to make it scalable as the solution grows? *

46. What memory management improvements could be added to the solution to reduce memory usage to run the solution? *

47. What improvements could be made to reduce load times for views? *

48. What improvements could be made to the solution's code to improve responsiveness for user input? *

49. Is there any redundant pieces of code used in the solution? *

☐ Yes

☐ No

50. Where can the redundant pieces of code be found, and how can it be improved? *

51. How is the overall quality of the code efficiency? *

0	1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	---	----

Terrible

Perfect

General Errors

52. Did you encounter any runtime errors, crashes, or broken functionality? *

☐ Yes

☐ No

53. How frequently did you encounter errors while reviewing or running the code?

0	1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	---	----

Not at all often

Always

54. How clear and helpful are the error messages shown to the user? *

0	1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	---	----

Not clear

Very clear

55. How could the error messages be improved? *

56. What is the most serious error or risk you noticed in the codebase? *

57. Which areas of the code would you prioritise for improving error handling? *

58. How could the errors in the code be handle to ensure the website does NOT crash due to them? *

59. Overall, how robust does the application feel from an error-handling perspective? *

0	1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	---	----

Not at all robust

Extremely robust

General Improvements

60. How easy was it to understand the purpose of the application from the code alone? *

- ☐ Extremely easy
- ☐ Somewhat easy
- ☐ Neutral
- ☐ Somewhat difficult
- ☐ Extremely difficult

61. How readable is the code overall (naming, formatting, structure)? *

0	1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	---	----

Not readable Very readable

62. How confident do you feel making changes or adding features to the codebase? *

- ☐ Extremely confident
- ☐ Somewhat confident
- ☐ Neutral
- ☐ Somewhat not confident
- ☐ Extremely not confident

63. What parts of the code would benefit most from refactoring? *

64. What is one thing you think was done particularly well in the codebase? *

65. If you were continuing this project, what would be your top priority be to improve the codebase? *

66. How is the overall quality of the codebase? *

0	1	2	3	4	5	6	7	8	9	10
---	---	---	---	---	---	---	---	---	---	----

Terrible

Perfect
