

SUMMARY OF FINDINGS

Greenfield Local Hub

After gathering the feedback on the Greenfield Local Hub website prototype, these are my summary on the findings. Overall, the users find the website satisfactory and effective for ordering products, but it does not compare favourably to similar websites. This is due several reasons, such as the button to open the basket from the products' page not working, the design of website not being appealing, or the website not indicating if an action was completed successfully or not. The findings indicated that the prototype did not meet all the requirements set out on the project proposal, and therefore in the next part of development the priority will to meet all the current requirements.
